

BREAKAWAY PULLEY

The Tactical Breakout Pulley allows the operator a single change in direction per each pulley used

Developed in partnership with Machstem Internation, the Breakaway Pulley is made to be carried in a tactical assault loadout. Without requiring a wedge, the pulley allows for a single, directional change; requiring only a simple knot to be tied onto the line at the desired break-away distance.

Due to it's spring loaded design, no other parts or extra mechanics are needed to reset the pulley.

Available in Aluminum or Steel.

FEATURES

Ultra Compact Design

High Load Capacity (+150 lbs)

Auto-Resets
